Edition 2.0 2026-07

INTERNATIONAL STANDARD

REDLINE VERSION

Grading Capacitors for high-voltage alternating current circuit-breakers -
Part 1: General **and grading capacitors**

CONTENTS

FOREWORD	4
1 Scope	6
2 Normative references	6
3 Terms and definitions	8
4 Abbreviated terms	13
5 Normal and special Service conditions	13
5.1 General.....	13
5.2 Normal service conditions	14
5.2.1 Ambient temperature	14
5.2.2 Altitude	14
5.2.3 Mechanical stress and vibrations	14
5.2.4 Additional service conditions for indoor and completely immersed grading capacitor	14
5.3 Special service conditions.....	14
5.3.1 General	14
5.3.2 Altitude correction.....	14
5.3.3 Earthquakes	16
6 Ratings.....	16
6.1 Rated voltage (U_{cr}).....	16
6.2 Rated insulation level.....	16
6.3 Rated frequency (f_r).....	18
7 Design and construction	18
7.1 Capacitance tolerances.....	18
7.2 Capacitor loss requirements.....	18
7.3 Partial discharge level.....	18
7.4 Angle of mounting	19
7.5 Minimum withstand value of mechanical bending load.....	19
7.5.1 Capacitors mounted on air insulated circuit-breaker.....	19
7.5.2 Immersed capacitors	19
7.6 Requirements for impregnation medium in capacitor Insulation fluids.....	19
7.6.1 General	19
7.6.2 Tightness Liquid insulation	19
7.6.3 Gas insulation	20
7.7 Protection against corrosion.....	21
7.8 Nameplates Marking of the equipment	21
7.9 Creepage distances for outdoor insulators capacitors	21
8 Type tests	21
8.1 Information for identification of specimens	21
8.2 Information to be included in type-test reports.....	22
8.3 Test conditions	22
8.4 Dielectric type tests	23
8.4.1 General	23
8.4.2 Capacitance measurement at power frequency.....	
8.4.3 Measurement of the tangent of the loss angle ($\tan\delta$)	
8.4.4 Partial discharge test.....	
8.4.2 Switching impulse voltage test.....	27

8.4.3	Lightning and chopped lightning impulse voltage tests.....	28
8.4.7	Power frequency voltage test.....	29
8.5	Voltage test at low and high temperature	29
8.5.1	Test procedure	29
8.5.2	Capacitor reduced-scale model design	29
8.6	Radio interference voltage (RIV) test	30
8.7	Power frequency withstand voltage test	30
8.8	Short-circuit discharge test	30
8.9	Resonance frequency measurements	30
8.10	Mechanical bending test	31
8.11	Tightness test at different temperatures	31
8.12	Tightness test to check gas ingress from a pressurised environment	32
8.13	Vibration test	32
9	Routine tests	33
9.1	General.....	33
9.2	Test conditions	34
9.3	Capacitance and $\tan \delta$ (loss angle) measurement at power frequency.....	34
9.4	Power frequency withstand voltage test	35
9.5	Partial discharge test.....	35
9.6	Tightness test	36
9.6.1	General	36
9.6.2	Oil impregnated capacitor	36
9.6.3	Tightness test for gas filled grading capacitors	37
9.7	Visual inspection and dimensional check	38
10	Design test.....	38
10.1	Aging test	38
10.1.1	Test procedure	38
10.1.2	Acceptance criteria	38
11	Recommendations for transport, storage, erection installation, operation and maintenance.....	39
11.1	General.....	39
11.2	Conditions during transport, storage and installation	39
11.3	Installation	39
11.3.1	General	39
11.3.2	Unpacking and lifting	40
11.3.3	Assembly.....	40
11.4	Operation.....	40
11.5	Maintenance	40
11.5.1	General	40
11.5.2	Recommendation for the installation and maintenance	41
12	Safety.....	41
12.1	General.....	41
12.2	Precautions by manufacturers.....	41
12.3	Precautions by users	41
12.4	National regulations	41
13	Environmental aspects	41

Annex A (informative) Corrosion: Information regarding service conditions and recommended test requirements	43
A.1 General.....	43
A.2 Recommended test requirements	43
Annex B (informative) Resonance frequency measurements	44
B.1 General.....	44
B.2 Time domain method	45
B.2.1 General	45
B.2.2 Test procedure	45
B.2.3 Measurement results	46
B.3 Frequency domain method.....	46
B.3.1 General	46
B.3.2 Test setup	46
B.3.3 Measurement results	47

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**Grading Capacitors for high-voltage alternating current circuit-breakers -
Part 1: General and grading capacitors**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

This redline version of the official IEC Standard allows the user to identify the changes made to the previous edition IEC 62146-1:2016. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.

IEC 62146-1 has been prepared by IEC technical committee 33: Power capacitors and their applications. It is an International Standard.

This second edition cancels and replaces the first edition published in 2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) Clause re-ordering and reworked sentences;
- b) New type and special tests.

The text of this International Standard is based on the following documents:

Draft	Report on voting
33/746/FDIS	33/750/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 62146 series, published under the general title *Capacitors for high-voltage alternating current circuit-breakers*, can be found on the IEC website.

Future documents in this series will carry the new general title as cited above. Titles of existing documents in this series will be updated at the time of the next edition.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

1 Scope

This part of IEC 62146 ~~is applicable to grading~~ includes generalities of capacitors used on alternating current circuit-breakers and introduces specifications for grading capacitors. Regarding grading capacitors, their function is to control the voltage distribution across the individual interrupter units of a multi-break circuit-breaker.

~~Grading~~ Capacitors can also be used in parallel to the interrupter unit on single break circuit-breakers to modify the Transient Recovery Voltage (TRV). This TRV capacitor application is covered by IEC 62146-2:2023.

~~The grading capacitor is a sub-component for the circuit breaker and shall be specified in accordance with the circuit-breaker specifications.~~

Capacitors for high-voltage alternating circuit breakers are sub-components for the circuit-breaker and are specified in accordance with the circuit-breaker specifications according to IEC 62271-1, IEC 62271-100, and if applicable to IEC 62271-203.

This document applies to grading capacitors falling into one or both of the following categories for:

- mounting on air-insulated circuit-breakers.
- mounting on enclosed circuit-breakers (for example immersed in ~~SF₆~~ insulating gas, in oil, etc.).

The testing for each of the above applications is in some cases different.

The object of this document is:

- to define uniform rules regarding performances, testing and rating;
- to define specific safety rules;
- to provide a guidance for installation and operation.

NOTE CIGRÉ TB-368 presents a study about the operating environment of voltage grading capacitors applied to high-voltage circuit-breakers (see [2]¹).

This document does not apply to ~~phase-to-earth capacitors installed on the circuit-breaker to modify the Transient Recovery Voltage~~ capacitors not directly associated with high-voltage alternating current circuit-breakers.
