

IEC 60076-4

Edition 2.0 2026-07

Corrected version
2026-09

INTERNATIONAL STANDARD

**Power transformers -
Part 4: Lightning impulse and switching impulse tests of power transformers
and reactors**

CONTENTS

FOREWORD	5
1 Scope	7
2 Normative references	7
3 Terms and definitions	7
4 General	7
5 Specified waveforms.....	8
6 Test circuit	8
7 Verification of the impulse voltage measuring system before a test	10
8 Lightning impulse tests	10
8.1 Waveforms.....	10
8.1.1 General	10
8.1.2 Front time T_1	10
8.1.3 Non-linear elements	11
8.1.4 Time to half-value T_2	11
8.2 Impulses chopped on the tail	12
8.2.1 Time to chopping	12
8.2.2 Test voltage function for tail-chopped lightning impulse tests.....	12
8.2.3 Test voltage function and presentation of test results	12
8.2.4 Rate of collapse and amplitude of reversed polarity of the chopped impulse.....	13
8.3 Terminal connections and applicable methods of failure detection	13
8.3.1 Terminal connections.....	13
8.3.2 Applicable methods of failure detection.....	14
8.4 Test procedures	14
8.5 Recording of tests.....	15
8.5.1 General	15
8.5.2 Digital recording systems.....	15
8.5.3 Void.....	15
8.5.4 Digital recording	15
9 Switching impulse tests	16
9.1 Special requirements	16
9.2 Transformers – Switching impulse tests	17
9.2.1 Waveforms	17
9.2.2 Terminal connections and applicable methods of failure detection	17
9.2.3 Test procedures.....	18
9.2.4 Recording of tests	19
9.3 Reactors – Switching impulse tests.....	20
9.3.1 Waveforms	20
9.3.2 Terminal connections and applicable methods of failure detection	20
9.3.3 Test procedures.....	21
9.3.4 Digital recording of impulse voltage waveform and impulse current.....	21
10 Interpretation of oscillograms.....	21
10.1 General.....	21
10.2 Lightning impulse – Oscillogram interpretations	21
10.2.1 General	21
10.2.2 Voltage recordings – Full wave tests	22

10.2.3	Current recordings – Full wave tests	23
10.2.4	Voltage and current recordings – Chopped-wave tests	23
10.3	Switching impulse – Oscillogram interpretations.....	24
10.3.1	Voltage recordings.....	24
10.3.2	Recordings of the impulse current	24
11	Digital recording – Transfer function analysis	25
12	Impulse testing report.....	27
13	Impulse test circuits and terminal connections	28
Annex A (informative)	Principles of waveform control.....	34
A.1	General.....	34
A.2	High-impedance windings ($L_t > 100$ mH).....	34
A.3	Low-impedance windings ($L_t < 20$ mH).....	35
Annex B (informative)	Typical oscillograms and digital recordings.....	42
Annex C (informative)	Examples of oscillograms with overshoots	64
Bibliography		71

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**Power transformers -
Part 4: Lightning impulse and switching impulse tests
of power transformers and reactors**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with can participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document can involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which can be required to implement this document. However, implementers are cautioned that this cannot represent the latest information, which can be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60076-4 has been prepared by IEC technical committee 14: Power transformers. It is an International Standard.

This second edition cancels and replaces the first edition published in 2002. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) lightning impulse tests in the presence of a relative overshoot value of 5 % or more (8.1.2). The 2002 edition did not specify how to proceed when the overshoot exceeds 5 %. In this revision, the testing laboratory is permitted to carry out the tests provided that the voltage function calculation, as defined in IEC 60060-1:2010, is applied;
- b) newly introduced test voltage for tail-chopped lightning impulse tests (8.2.2);

- c) switching impulse tests on 3 phase transformers, test connections (see Figure 5 and Figure 6);
- d) new Glaninger circuit in Clause A.3 about low-impedance windings ($L_t < 20$ mH);
- e) new Annex C with examples of oscillograms with peak voltage overshoot.

The text of this International Standard is based on the following documents:

Draft	Report on voting
14/1204/FDIS	14/1208/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 60076 series, published under the general title *Power transformers*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

This corrected version of IEC 60076-4:2026 incorporates the following correction:

- The conversion of Figure 6 to PDF resulted in half of the figure being blank. A new conversion has been performed.

1 Scope

This part of IEC 60076 applies to lightning and switching impulse tests on power transformers and reactors.

Information is given on waveforms, test circuits including test connections, earthing practices, failure detection methods, test procedures, measuring techniques and interpretation of results.

Where applicable, the test techniques are as described in IEC 60060-1 and IEC 60060-2.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
