REDLINE VERSION

Power transformers -
Part 4: ~~Guide to the~~ Lightning impulse and switching impulse ~~testing –~~ tests of power transformers and reactors

ICS 29.180

ISBN 978-2-8327-1383-9

CONTENTS

FOREWORD 5
1 Scope 7
2 Normative references 7
3 Terms and definitions 7
4 General 8
5 Specified waveforms 8
6 Test circuit 8
7 ~~Calibration~~ Verification of the impulse voltage measuring system before a test 10
8 Lightning impulse tests 10
8.1 ~~Waveshapes~~Waveforms 10
8.1.1 General 10
8.1.2 Front time T_1 10
8.1.3 Non-linear elements 11
8.1.4 Time to half-value T_2 11
8.2 Impulses chopped on the tail 12
8.2.1 Time to chopping 12
8.2.2 Test voltage function for tail-chopped lightning impulse tests 12
8.2.3 Test voltage function and presentation of test results 13
8.2.4 Rate of collapse and amplitude of reversed polarity of the chopped impulse 13
8.3 Terminal connections and applicable methods of failure detection 14
8.3.1 Terminal connections 14
8.3.2 Applicable methods of failure detection 14
8.4 Test procedures 15
8.5 Recording of tests 15
8.5.1 General 15
8.5.2 ~~Analogue and~~ Digital recording systems 15
8.5.3 ~~Analogue recording of waveshapes~~ Void 16
8.5.4 Digital recording ~~of waveshapes~~ 17
9 Switching impulse tests 18
9.1 Special requirements 18
9.2 Transformers – Switching impulse tests 18
9.2.1 Waveforms 18
9.2.2 Terminal connections and applicable methods of failure detection 19
9.2.3 Test procedures 20
9.2.4 Recording of tests 21
9.3 Reactors – Switching impulse tests 23
9.3.1 ~~Waveshapes~~Waveforms 23
9.3.2 Terminal connections and applicable methods of failure detection 24
9.3.3 Test procedures 24
9.3.4 ~~Analogue and~~ Digital recording of impulse voltage ~~waveshape~~ waveform and impulse ~~response~~ current 24
10 Interpretation of oscillograms ~~or digital recordings~~ 24
10.1 General 24
10.2 Lightning impulse – Oscillogram interpretations 25
10.2.1 General 25

10.2.2 Voltage recordings – Full wave tests 25
10.2.3 Current recordings – Full wave tests 26
10.2.4 Voltage and current recordings – Chopped-wave tests 27
10.3 Switching impulse – Oscillogram interpretations 27
10.3.1 Voltage recordings 27
10.3.2 Recordings of the impulse ~~response~~ current 28
11 Digital ~~processing~~ recording~~, including~~ – Transfer function analysis 28
12 Impulse testing report 30
13 Impulse test circuits and terminal connections 31
Annex A (informative) Principles of ~~waveshape~~ waveform control 38
A.1 General 38
A.2 High-impedance windings (L_t > 100 mH) 39
A.3 Low-impedance windings (L_t < 20 mH) 41
Annex B (informative) Typical oscillograms and digital recordings 47
Annex C (informative) Examples of oscillograms with overshoots 71
Bibliography 78

Figure A.2 – Wavetail control for low impedance windings 41
Figure A.3 – Damped oscillation 42
Figure A.4 – Effects due to short length of wavetail 44
Figure A.5 – Winding earthed through a resistor 45
~~Figure A.6 – Resistance earthing of low-impedance windings~~ .....
Figure A.6 – Glaninger circuit 46
Figure B.1 – Lightning impulse, full wave failure – Line-to-neutral breakdown across high-voltage winding of 400 kV generator transformer 49
Figure B.2 – Lightning impulse, full wave failure – Breakdown between discs at entrance to high-voltage winding of 115 kV transformer 50
Figure B.3 – Lightning impulse, interlayer breakdown in coarse-step tapping winding of a 400/220 kV transformer 51
Figure B.4 – Lightning impulse, full wave failure – Breakdown between leads of two 1,1 % sections of outside tapping winding of 400 kV generator transformer 52
Figure B.5 – Lightning impulse, full wave failure – Breakdown short-circuiting one section of the fine-step tapping winding of a 220 kV transformer 53
Figure B.6 – Lightning impulse, full wave failure – Breakdown between parallel conductors of a main high-voltage winding of a 220/110 kV transformer 53

Figure B.7 – Lightning impulse, full wave failure – Breakdown between foils of 66 kV bushing on tested winding 54
Figure B.8 – Lightning impulse, full wave failure – Bushing flange grounding 55
Figure B.9 – Lightning impulse, chopped-wave failure – Breakdown between turns in the main high-voltage winding of a 115 kV transformer 56
Figure B.10 – Lightning impulse, chopped-wave failure – Breakdown between turns in a fine-step tapping winding of a 220 kV transformer 57
Figure B.11 – Chopped lightning impulse – Impulses at different voltage levels with identical times to chopping when testing a 115 kV transformer 58
Figure B.12 – Chopped lightning impulse – Effects of differences in times to chopping when testing a 220 kV transformer 59
Figure B.13 – Full lightning impulse – Effect of non-linear resistors embodied in neutral end on-load tap-changer of a transformer with separate windings 60
Figure B.14 – Full lightning impulse – Effect of generator firing differences at different voltage levels when testing a 400 kV transformer 61
Figure B.15 – Switching impulse – Satisfactory test on a 400 kV three-phase generator transformer 62
Figure B.16 – Switching impulse – Breakdown by axial flashover of the main high-voltage winding of a 525 kV single-phase, generator transformer 63
Figure B.17 – Switching impulse – Satisfactory test on a 33 MVAr, 525 kV single-phase reactor 64
Figure B.18 – Full lightning impulse – Evaluation of a non-standard waveform – Influence of in-built smoothing algorithms in digitizers 65
Figure B.19 – Full lightning impulse – Non-standard waveform, superimposed oscillations with >50 % amplitude and frequency <500 kHz 65
Figure B.20 – Chopped lightning impulse – Non-standard chopped wave on a layer type winding 66
~~Figure B.21 – Full lightning impulse – Non-standard waveshape, comparison of non-standard waveshapes by digitizers of different make from the same recording .....~~
Figure B.21 – Lightning impulse – Comparison of the transfer function of a full wave and a chopped wave 68
Figure B.22 – Full lightning impulse – Test-circuit problem caused by a sparkover to earth from a measuring cable 69
Figure B.23 – Full lightning impulse – Failure digital recordings of a flashover between tap leads of a tap changer and of a flashover between coarse and fine tapping windings 70
Figure C.1 – Lightning impulse oscillogram with an overshoot having a frequency higher than 500 kHz (beta_k = β' = 7,35 %) – 3 phase transformer, 27,6 kV/208 V, 150 kVA, YNyn0 72
Figure C.2 – Lightning impulse oscillogram with an overshoot having a frequency higher than 500 kHz (beta_k = β' = 10,3 %) – Transformer, 138 kV/13,8 kV, 33,3 MVA, Dyn1 73
Figure C.3 – Lightning impulse oscillogram with an overshoot having a frequency higher than 500 kHz (beta_k = β' = 14,2 %) – Transformer, 14,4 kV/120 V – 240 V, 50 kVA, 1 phase 74
Figure C.4 – Lightning impulse oscillogram with an overshoot having a frequency less than 500 kHz (beta_k = β' = 30,2 %) – Transformer, 34,5 kV/560 V, 3 600 kVA, 3 phase 74
Figure C.5 – Lightning impulse oscillogram with an overshoot − β' = 6,80 % Single-phase auto-transformer 267 MVA − 420 kV/247 kV/28 kV – LV terminal 247 kV 75
Figure C.6 – Lightning impulse oscillogram with an overshoot − β' = 13,40 % Three-phase auto-transformer 600 MVA − 345 kV/141,5 kV/13,8 kV – LV terminal 141,5 kV 75

Figure C.7 – Lightning impulse oscillogram with an overshoot – β'= 23,22 % Single-phase auto-transformer 267 MVA – 420 kV/247 kV/28 kV – TV terminal 28 kV 76

Figure C.8 – Example of lightning impulse oscillogram on bushing (capacitance test object) with an overshoot β' = 3,92 %, without complex oscillations 77

Table B.1 – Summary of examples illustrated in oscillograms and digital recordings 47

Table C.1 – Summary of lightning impulse test oscillograms with overshoot 71

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

Power transformers - Part 4: ~~Guide to the~~ Lightning impulse and switching impulse ~~testing – tests of~~ power transformers and reactors

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with can participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document can involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which can be required to implement this document. However, implementers are cautioned that this cannot represent the latest information, which can be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

This redline version of the official IEC Standard allows the user to identify the changes made to the previous edition IEC 60076-4:2002. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.

IEC 60076-4 has been prepared by IEC technical committee 14: Power transformers. It is an International Standard.

This second edition cancels and replaces the first edition published in 2002. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) lightning impulse tests in the presence of a relative overshoot value of 5 % or more (8.1.2). The 2002 edition did not specified how to proceed when the overshoot exceeds 5 %. In this revision, the testing laboratory is permitted to carry out the tests provided that the voltage function calculation, as defined in IEC 60060-1:2010, is applied;

b) newly introduced test voltage for tail-chopped lightning impulse tests (8.2.2);

c) switching impulse tests on 3 phase transformers, test connections (see Figure 5 and Figure 6);

d) new Glaninger circuit in Clause A.3 about low-impedance windings (L_t < 20 mH);

e) new Annex C with examples of oscillograms with peak voltage overshoot.

The text of this International Standard is based on the following documents:

Draft	Report on voting
14/1204/FDIS	14/1208/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 60076 series, published under the general title *Power transformers*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

– reconfirmed,

– withdrawn, or

– revised.

This corrected version of IEC 60076-4:2026 RLV incorporates the following correction:

- The conversion of Figure 6 to PDF resulted in half of the figure being blank. A new conversion has been performed.

1 Scope

~~This part of IEC 60076 gives guidance and explanatory comments on the existing procedures for lightning and switching impulse testing of power transformers to supplement the requirements of IEC 60076-3. It is also generally applicable to the testing of reactors (see IEC 60289), modifications to power transformer procedures being indicated where required.~~

This part of IEC 60076 applies to lightning and switching impulse tests on power transformers and reactors.

Information is given on ~~waveshapes~~ waveforms, test circuits including test connections, earthing practices, failure detection methods, test procedures, measuring techniques and interpretation of results.

Where applicable, the test techniques are as ~~recommended~~ described in IEC 60060-1 and IEC 60060-2.

2 Normative references
