INTERNATIONAL ELECTROTECHNICAL COMMISSION

**Multimedia systems and equipment for vehicles - External visual systems
of external human-machine interfaces (eHMI) for automated vehicles -
Part 1: General**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> and www.iso.org/patents. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TR 63676-1 has been prepared by IEC technical committee 100: Audio, video and multimedia systems and equipment. It is a Technical Report.

The text of this Technical Report is based on the following documents:

Draft	Report on voting
100/4530/DTR	100/4583/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at https://www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at <https://www.iec.ch/publications>.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under <https://webstore.iec.ch> in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

INTRODUCTION

The concept of an external human-machine interface (eHMI) multimedia system in automated vehicles involves using external displays or communication channels to interact with pedestrians or other road users. The eHMI aims to enhance communication, safety, and mutual understanding between automated vehicles and their surroundings.

An example of an eHMI multimedia system could be external displays on the vehicle's exterior, such as LED panels, OLED displays, LCDs, or projection systems, to convey messages or signals to pedestrians. For instance, an automated vehicle might display a message or animation on its external display, indicating that it has detected other road users and will yield the right of way. This helps pedestrians and road users understand the vehicle's intentions and facilitates safer interactions on the road.

It is intended that this series of documents consist of the following parts:

1. Overview of the eHMI for automated vehicles as a first part and it is a Technical Report:

This document introduces the eHMI concept and its importance in the context of automated vehicles. It highlights the major components of the system and discusses the performance of implementing external visual systems in such vehicles.

2. Multimedia system process as a second part:

It is intended that this part describes the architecture of external visual systems used in the eHMI multimedia systems. This could involve discussing the integration of external displays, LED panels, OLED displays, LCDs, projection systems, and other visual communication methods into vehicle design.

3. Multimedia system requirements for human factors and user experience as a third part:

It is intended that this part addresses human factors considerations, such as the legibility, visibility, and comprehension of the displayed information by pedestrians and other road users. It discusses design principles and guidelines to ensure effective communication and user-friendly experiences.

Overall, eHMI multimedia systems in automated vehicles aim to build trust, enhance communication, and improve safety between vehicles and their external environment by using visual, auditory, or other interactive means to convey information effectively.

This document introduces various external visual systems for multimedia services in automated vehicles, explains how to assess the impact during development, and summarises new work items in the near future.

1 Scope

This document describes the system overview of external visual systems of external human-machine interfaces (eHMI). These systems are specifically designed for use in automated vehicles. It provides an introduction and background information on the concept of eHMIs, highlighting their significance in the context of automated vehicles. Additionally, it describes the architecture and key components of external visual systems used in eHMI multimedia systems.

It does not deal with:

- a) external display usage scenario;
- b) UX and UI of external display;
- c) hardware performance of eHMI;
- d) eHMI regulation of automated vehicle;
- e) special vehicle conditions that use eHMI external displays, such as trucks, ambulances, fire engines, buses, and taxis.

2 Normative references

There are no normative references in this document.
