CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references	8
3 Terms and definitions	8
4 Identification.....	10
4.1 Byte order	10
4.2 Unit identification	10
4.3 Flow identifiers	10
4.4 Address format.....	11
5 Message format.....	12
5.1 General.....	12
5.2 Header	13
5.3 Variable part	14
5.3.1 General	14
5.3.2 Information element format.....	14
5.3.3 Order of occurrence of information elements	15
5.4 Data formats	16
5.5 Contents of fixed and variable parts	16
5.5.1 FindRoute messages	16
5.5.2 ClearDown messages	16
5.5.3 AddFlow messages	16
5.5.4 NetworkData and EndToEndData messages.....	16
5.5.5 AsyncSetup messages	17
5.5.6 Extended message types.....	17
5.6 Information element types	17
5.6.1 Coding of “type” field	17
5.6.2 Called address	18
5.6.3 Flow descriptor.....	18
5.6.4 Data format or protocol.....	19
5.6.5 Start time.....	19
5.6.6 End time.....	19
5.6.7 Call importance	19
5.6.8 Service (or programme) name	19
5.6.9 Source name	19
5.6.10 Destination name.....	20
5.6.11 Privilege level.....	20
5.6.12 Password	20
5.6.13 Charge for call.....	20
5.6.14 Calling address.....	20
5.6.15 Route metric.....	20
5.6.16 Synchronous service parameters	21
5.6.17 Asynchronous service parameters	21
5.6.18 Link-specific resource allocations	22
5.6.19 End-to-end delay	22

5.6.20	Route identifier of multicast	22
5.6.21	Cause.....	23
5.6.22	Route and flow selection.....	23
5.6.23	Alternatives	23
5.6.24	Group	23
5.6.25	Interim offer.....	24
5.6.26	Path MTU	24
5.6.27	Number of destinations	25
5.6.28	Selector for an individual destination	25
5.6.29	User data	25
5.6.30	Extended IE types	25
6	Protocols	26
6.1	General	26
6.2	Establishing a route.....	27
6.2.1	Connection of flows	27
6.2.2	Request message	27
6.2.3	Action on receiving a FindRoute request	29
6.2.4	Action on receiving on a FindRoute response	31
6.2.5	Passing on a FindRoute confirmation	33
6.2.6	Action of the responder on receiving a FindRoute confirmation.....	33
6.2.7	FindRoute completion message	33
6.3	Disconnection of routes and flows	34
6.3.1	General	34
6.3.2	ClearDown request message	34
6.3.3	Action on receiving a ClearDown request message.....	35
6.4	Adding new flows to an existing route.....	35
6.5	Information messages related to a route.....	35
6.5.1	General	35
6.5.2	Notification of the number of destinations	36
6.5.3	Changing service parameters	36
6.5.4	Out-of-band data	36
6.6	Quasi-connectionless service	36
6.6.1	General	36
6.6.2	Request message.....	36
6.6.3	Action on receiving request	37
7	Media formats	37
7.1	Identification.....	37
7.2	Packet data	37
7.2.1	General packet data	37
7.2.2	Other packet formats	38
7.3	Pulse-code modulated audio	38
7.3.1	Rationale.....	38
7.3.2	Sequencing octet.....	38
7.3.3	Subframe format.....	39
7.3.4	Frame format.....	39
7.3.5	Transport.....	40
7.3.6	Signalling of format.....	40
8	Cause codes	42
8.1	ITU-T standard cause codes.....	42

8.2 Other cause codes	42

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**COMMON CONTROL INTERFACE FOR NETWORKED
DIGITAL AUDIO AND VIDEO PRODUCTS –****Part 5-2: Transmission over networks –
Signalling**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62379-5-2 has been prepared by technical area 4: Digital system interfaces and protocols of IEC technical committee 100: Audio, video and multimedia systems and equipment.

The text of this standard is based on the following documents:

CDV	Report on voting
100/2050/CDV	100/2158/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

A list of all parts in the IEC 62379 series, published under the general title *Common control interface for networked digital audio and video products*, can be found on the IEC website.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

INTRODUCTION

IEC 62379 specifies the Common Control Interface, a protocol for managing networked audiovisual equipment. The following parts exist or are planned:

- 1 General
- 2 Audio
- 3 Video
- 4 Data
- 5 Transmission over networks
- 6 Packet transfer service
- 7 Measurement

IEC 62379-1:2007 specifies aspects which are common to all equipment, and it includes an introduction to the Common Control Interface.

IEC 62379-2:2008, IEC 62379-3 (under consideration) and IEC 62379-4 (under consideration) specify control of internal functions specific to equipment carrying particular types of live media. IEC 62379-4 refers to time-critical data such as commands to automation equipment, but not to packet data such as the control messages themselves.

IEC 62379-5 specifies control of transmission of these media over each individual network technology. It includes network specific management interfaces along with network specific control elements that integrate into the control framework.

IEC 62379-5-1 specifies management of aspects which are common to all network technologies. IEC 62379-5-3 onwards specify management of aspects which are particular to individual networking technologies.

IEC 62379-5-2 (this standard) specifies protocols which can be used between networking equipment to enable the setting up of calls which are routed across different networking technologies.

IEC 62379-6 specifies carriage of control and status messages and non-audiovisual data over transports that do not support audio and video, such as RS232 serial links, with (as for IEC 62379-5) a separate subpart for each technology.

IEC 62379-7 specifies aspects that are specific to the measurement of the service experienced by audio and video streams and in particular to the requirements of EBU ECN-IPM Measurements Group.

COMMON CONTROL INTERFACE FOR NETWORKED DIGITAL AUDIO AND VIDEO PRODUCTS –

Part 5-2: Transmission over networks – Signalling

1 Scope

This part of IEC 62379 specifies protocols which can be used between networking equipment to enable the setting up of calls which are routed across different networking technologies.

It also specifies encapsulation of digital media within those calls.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
